BEYOND TOPIARY

How Gabellini Sheppard Balances Space and Light to Create Sculptural Masterpieces

The mesmerizing curves of the Fibonacci Avanda Recamier, the formidable base of the Fibonacci Fondo Table—each of these elements embodies the exquisitely composed Fibonacci collection, designed by the prestigious award-winning Michael Gabellini and Kimberly Sheppard.

In Fibonacci, Gabellini Sheppard masterfully balances dramatic curves with light and weightlessness to create a collection that is just as captivating as it is inviting. Skillfully handwoven by artisans who possess the patience, dexterity and brilliance to follow hundreds of strands and multiple patterns, the Fibonacci collection exemplifies superior craftsmanship, earning it the mindful distinction of a JANUS et Cie Masterpiece. Our innovative proprietary JANUSfiber is carefully handwoven over a steel frame to achieve an artistic form that is arrestingly beautiful.

The collection explores natural forms that evoke fluid movement while paying homage to the Fibonacci series, the progressional geometric structure found in nature. A synthesis of design, craft and technology, Fibonacci transcends boundaries as functional works of art.
