

JANUS et Cie®

BEYOND TOPIARY

The Imaginative Bench Series that Offers Endless Configurations

The award-winning RIOS introduces six new pieces—cocktail table, side table, connection module, planter, table attachment, and trash receptacle—to the innovative Rio collection, a mesmerizing, sculptural bench series made from durable powder coated aluminum.

With these additions, the Rio collection offers exciting new lounge configurations for engaging built environments from intimate gathering areas to a large courtyard in a public park. Available in Bronze and Metallic Grey, the captivating Rio elements can be configured in endless customizable options that seamlessly merge the practical with the playful.

The Rio collection is an exclusive collaboration with RIOS partners, all formally trained in both architecture and landscape architecture and design with a singular vision: to imagine and create complete environments. The firm's client list is as diverse as the services it provides, and includes entertainment studios, commercial developers, cultural and educational institutions, city agencies, retail and restaurant establishments, and private individuals. This group's fascination with the interrelationships among design disciplines is embodied in projects such as Tysons Corner Center, Virginia, where visitors are greeted by bright-colored Rio Benches—originally designed exclusively for this installation and later to become a celebrated JANUS et Cie collection.
